

## Cholera toxin

Cell Culture Reagents-Growth Supplements

## Catalogue Number: SC104

**Description:** Toxin consisting of an A subunit (27 kDa) with five B subunits (approximately 12 kDa each ) surounding, which attach the toxin to ganglioside GM1 on the cell surface. The A subunit catalyzes ADPribosylation of the o-subunit of the stimulatory G protein (Gas), reducing GTPase activity and activating the a-subunit. This activation of Gas leads toan increase in the activity of adenylyl cyclase, resulting in increased levels of cAMP.Cholera toxin has also been reported to ADP-ribosylate tubulin. Shown to be a potent mucosal vaccine adjuvant, inducing T helper cell type 2 responses by inhibiting the production of interleukin-12.

Physical Appearance: Sterile filtered clear solution.

Formulation: 50ug/ ml solution.

Pack Size: 1.0 mL

Stability: Stored at -20°C.Please avoid freeze-thaw cycles.

Suitability: Cell culture tested.
